Trace Elements - HBED/EDDHA-CHELATES

ULTRAFER - Product Leaflet

MENAFER ULTRAFER has been specially developed to treat iron deficiency in short-, medium-, and long-cycle crops.

Its unique formulation ensures exceptional performance in various areas:

- Fast response after application
- Long-lasting effect from a single dose
- Effective on all soil types, especially highly alkaline soils
- 7.0% fully available iron
- Unique triple-action formula (rapid uptake, extended efficacy, and high effectiveness against iron chlorosis, particularly in alkaline soils)
- Effective in pH ranges up to 12
- Highly stable in soil, more than any other chelates, UV-resistant
- Low reactivity with copper
- Compatible with most water-soluble fertilizers

Composition

Component	Content (%)
Iron (Fe), total	7.0% ± 1.0%
Iron (Fe), chelated with HBED	4.0% ± 0.5%
Iron (Fe), chelated with EDDHA	3.0% ± 0.5%
